

# The **MiURA**

## Advantage

for Breweries & Distilleries

3-5 min

### Fast Start

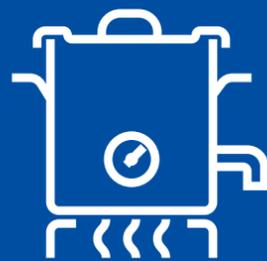

Miura's water-tube system is fast-start, going from cold to fill steam in under 5 minutes. Allowing breweries and distilleries to shutdown overnight and get going faster in the morning. Saving in energy and personnel costs.

### Modular Design

We understand brewers and distillers' unique business challenges. Starting small doesn't always mean staying small, with Miura's modular design, we can grow with you from day one. Modular on-demand boiler systems reduce energy consumption by dividing the output capacity among multiple small units.

A modular system manages fluctuating steam needs. Multiple boilers on one MI controller allows for varying steam requirements. Meeting you needs on-demand and keeping energy costs down.

Craft breweries can be tight on space. Miura's high efficiency boilers pack lots of horsepower into small footprints. Freeing up floor space and leaving room to grow with your business.

### Steam Sterilization

Aside from using boiler steam for processing and the cooking process, steam output from your Miura boiler can be used for effective sterilizing of equipment and packaging and pasteurization of product. for bottling.
